

GLUTATHIONE INJECTION OR IV PUSH CONSENT FORM

General Information

L-Glutathione, or simply glutathione, is a powerful antioxidant made of amino acids. Supplementally, glutathione can be taken in the treatment and prevention of cataracts, glaucoma, aging, alcoholism, cancer, heart disease, liver disease, lung disease, Alzheimer's disease, Parkinson's disease, osteoarthritis, diseases that breakdown the body's immune system and many more. Glutathione levels in the body naturally decline as we age, but can also be reduced by factors like stress, malnutrition, and environmental toxins.

How is Glutathione useful in the human body?

Glutathione has many functions within the body. It is vital to mitochondrial function, necessary for the production of DNA. Its ability to cross the blood-brain barrier means it plays an important role in removing toxins, such as mercury, from the brain and other cells. It is key in supporting immune function, metabolism, forming sperm cells, tissue building and repair, and helping with certain enzyme functions. As a powerful antioxidant, it may help fight the effects of free radicals, which cause oxidative stress, damage healthy cells, and contribute to aging and certain degenerative illnesses.

Indications

Glutathione is indicated for those with heart, liver, and lung disease. Other health issues that may be prevented or treated by glutathione supplementation include:

- Anemia
- Cystic Fibrosis
- Cancer
- Alzheimer's
- Parkinson's
- Cataracts
- Glaucoma
- Symptoms of Aging
- Alcoholism
- Hepatitis
- Memory Loss
- AIDS
- Chronic Fatigue Syndrome
- Osteoarthritis
- Infertility in Men

While glutathione has been proven helpful in the reduction of oxidative stress, many proposed uses require further testing to verify the benefits of supplementation.

Side Effect

Glutathione is generally safe for most adults. When taken as an inhalant, glutathione may cause difficulty breathing and trigger asthma attacks. Some studies have linked long-term consumption of glutathione to lower zinc levels.

Contraindications

Glutathione is not recommended for use by individuals with asthma, due to the possibility of increasing its symptoms. There is not enough information on the impact of this medication on individuals who are pregnant or breastfeeding; therefore use is not advised. It is important to talk with your healthcare provider before starting to supplement glutathione to ensure it is the right solution for you.

Interactions

Glutathione may interact with some medications. It is always important to list any medications, supplements, or herbal products you may be taking for your doctor.

WRITTEN CONSENT

I acknowledge the following has been discussed with me:

- Treatments: can be once a month, once a week, or twice a week and will be determined by the provider.
- I understand and agree that all services rendered to me are charged directly to me and that I am personally responsible for payment. I further agree in the event of nonpayment, to bear the cost of collection, and/or Court costs, and reasonable legal fees, should this be required.
- By signing below, I acknowledge that I have read the foregoing informed consent and agree to the treatment with its associated risks. I hereby give consent to perform this and all subsequent Amino Acids Injections or IV Push with the above understood. I hereby release the provider, the person injecting Amino Acids, and the facility from liability associated with this procedure.
- By signing below I certify that I have read and agree to the above informed consent and require no further time to review.

BY MY SIGNATURE BELOW, I ACKNOWLEDGE THAT I HAVE READ AND FULLY UNDERSTAND THE CONTENTS OF THIS INFORMED CONSENT FORM. I HAVE BEEN GIVEN THE OPPORTUNITY TO HAVE ALL MY QUESTIONS ANSWERED TO MY SATISFACTION BY HONEY SKINCARE HEALTHCARE TEAM.

I have read this form and understand it, and I request the performance of the procedure.
